

Welcome To Janhit Foundation

Founded in 1998 by Dr. Anil Rana, an educationist by profession but an environmentalist at heart to work for Environmental & Water Conservation in Western Uttar Pradesh. Currently working extensively on Water Conservation, Sustainable Agriculture, Environmental Conservation, Child Rights Protection & Women Rights Protection along with Income Generation Activities for women from marginalized communities. Awareness in all the above-mentioned themes has always gone hand in hand with our work on the ground since our inception.

We have also been given the responsibility to manage the 24X7 Child Helpline 1098 on behalf of Ministry of Women & Child Development, Govt. of India in Meerut and with our excellent work record we were also awarded to run the Railway Child Help Desk (Railway Childline) in Meerut in 2019, we became an obvious choice.

Registered as a non-profit under Societies Registration Act, 1860 with tax exemptions from Income Tax Department under Section 12A & 80G Also registered under Foreign Contribution Regulation Act, 2010 and has had long-term partnered with bi-laterals, multi-laterals and many corporate donors in the past and has implemented multiple projects successfully.

We welcome you to Janhit Foundation and be a part of the impactful work that we are doing everyday to bring sustainable change in the lives that we touch.

Minds Behind the Vision

Smt. Anita
Rana-
Director

Anita Rana stepped into as the head of the organization on the untimely demise of the founder of the organization Lt. Dr. Anil Rana in 2008. She came out as a housewife and with absolute passion and dedication towards the vision with which the organization was set up, she almost trained herself with the ongoing projects and also build the child rights and the women rights themes of the organization both in terms of the vision and the programs.

She has crafted her own persona as a Social worker in the region who is always active and ready to help and support anyone in need in any region that approaches her with any kinds of problems. She has also been added over 100 accolades and awards in the last 13 years of her as the Head of the organization. It was only due to her persistence in implementing better projects that many institutional and corporate donors came forward and supported various projects in the region in the themes of Water, Sanitation, Health & Hygiene and Health for women in order to promote women empowerment through awareness and adopting easy solutions to their problems.

She has also been serving as the Director for Meerut Childline since 2008 and it was due to regular monitoring and satisfactory work that we were awarded another Childline in Meerut – Railway Child Helpdesk and she has been serving as the Director since 2019. Further to this she recently envisioned a program to empower the women across the city of Meerut by initiating a Women Helpline and a rich panel having members from law, education, social sector, medicine, psychologist, career counsellors etc. to advice the women in case they are in any kind of distress.

Dr. Anil
Rana

Dr. Anil Rana who was an educationist and taught in the Kurukshetra University after finishing his PhD from Jawaharlal Nehru University, Delhi. After doing this for a couple of years, he realized serious problems in the region of western Uttar Pradesh in the area of Water & Agriculture, he decided to quit his high paying job as a professor and came back to his birthplace that is Meerut and founded an Ngo with a vision to improve soil and water quality in the region.

That was how, he started working with farmers and students in the region to promote organic farming and water conservation for the region to have a more sustainable living in the region. With his leadership, the organization could bring in multiple innovative projects supported by many institutional donors like Sir Ratan Tata Trust, Oxfam India, IGSSS, CAF India, Ford Foundation, Coca Cola India, and various national corporates with small to big support for the betterment of the region. His vision behind the organization could be gathered from one of his statements.

"To make my life's trip more interesting, I picked the intruded path, and when I returned to my objective, I saw a swarm of individuals who were all supporting the same social cause."

Unfortunately Dr. Rana passed away untimely in 2008 and his wife took on as the head of the organization and is carrying forward his vision and name in the form of the projects being implemented by the project.

Janhit's Location

Janhit Foundation operates from our head office in Meerut and our geographical reach covers the district of Meerut in Western Uttar Pradesh, in addition to extending to other neighbouring districts including Muzaffarnagar, Saharanpur, Baghpat, Ghaziabad and Noida.

Our main office address is listed below:

Janhit Foundation

771/8, Jagriti Vihar
Meerut-250004,
Uttar Pradesh, India
Phone: +91-121-4004123, 0121-4302021
E-mail Id: janhitfoundation@gmail.com

Vacancies For Janhit

All Janhit Foundation's jobs are advertised here.

No Current Vacancies.

Volunteers and Interns

Please submit a CV and a cover letter (1 page maximum) detailing:

1. Why you want to work for Janhit Foundation
2. Length of requested placement

3. The relevance of your skill-set to our work

4. The focus areas in which you would like to contribute

The above documents should be submitted via email, to janhitfoundation@gmail.com

Sustainable Agriculture

Throughout the last decade, the Janhit Foundation has promoted organic agriculture as a viable and sustainable alternative to conventional farming practises.

Toxic agrochemicals are heavily used in conventional agriculture, and they enter the food chain, seep into water sources, injure cattle and wildlife, deplete the soil, disrupt natural ecosystems, and contaminate the agricultural crop for which they were originally introduced.

Organic farming practises improve soil quality year after year, resulting in more fruitful land. This improves the farmer's long-term yield, nutrient value, and potency of their crops.

We work with small, marginalised farmers all throughout the region to help them increase their revenue by lowering input costs and switching to organic farming. Because sugarcane is the primary crop grown in Western Uttar Pradesh, we've worked closely with sugarcane farmers to encourage them to use fewer toxic Persistent Organic Pollutants (POPs) and to provide them with innovative technologies and agricultural techniques to improve their crop and increase yield.

We have been encouraging farmers in the region to embrace organic and natural farming practises in order to protect the environment, soil quality, subsurface water quality, and the health of agricultural yield consumers. We work with around 2000 farmers in the district and have completed a number of initiatives with them.

Major Programs

1. From Seed to Market– This was a 3-year project supported by Ford Foundation which promoted organic farming among marginalized farmers selecting 400 farmers and providing them from seed to regular trainings to Compost Pits to Jeevamrit to Certification and finally Market for their Organic Produce.
2. Demotivating Farmers to use Lindane and Endosulphan – This was a project where we introduced farmers to organic manure LADEP to make them leave using these really harmful chemicals in farming.
3. Soil Testing This was done in 210 villages across Meerut to start a research-based dialogue with the farmers.
4. Biodiversity Herbal Gardens in SD Public School, Muzaffarnagar and Godwin Public School, Meerut.
5. Promotion of Cultivation of Lemongrass, Citronella & Neem with the farmers providing them market for the same leading to their income generation multifold.

For full details of projects which we have undertaken in this field, please [Click Here](#)

Water Conservation & Awareness

In Uttar Pradesh, the Janhit Foundation takes a novel method for dealing with water shortages. This strategy is centred on ensuring that all of our efforts in this field benefit the people who live in our society while also improving environmental circumstances.

Water conservation

We devote a significant portion of our efforts on preserving and revitalising natural water supplies. Uttar Pradesh has a network of rivers, ponds, and canals, although encroachment is prevalent, and many of them are dry. We have been working with a variety of partners to rejuvenate these buildings so that communities can use them for agricultural and other uses.

As a remedy to the ever-increasing water crisis, we promote the adoption of clean technology such as rainwater collection. This helps to replenish the region's depleted groundwater levels while also supplying excess water for home usage.

Mitigation of water pollution

In India, waste dumping from industrial facilities is prevalent. At the moment, the legal system poses little threat to industries that pollute the environment on a regular basis.

As a result, water contamination is a serious issue, with many industries releasing untreated waste water directly into the groundwater and the region's many rivers. The Janhit Foundation aims to address these issues by providing factual proof of the harm that the industry has caused to the environment and, in many cases, human health. Many success examples exist where this action resulted in a community cooperation between industry and local residents to address environmental challenges.

Major Programs

2nd Rain Centre in India – This was one of its kind water library with educative panels, books, videos etc. on water set up by the organization in Meerut.

Revival of Water Bodies– We have revived over 25 water bodies in Meerut, Ghaziabad & Sonapat with an average of 3 water bodies an year.

Promotion of Low-Cost Water Efficient Techniques among the farmers.

Created a Water Census of the region in 2003 and again in 2013 for the region.

- Rainwater Harvesting – in multiple government and private buildings in the region.

For full details of projects which we have undertaken in this field, please [Click Here](#).

Environment

Asides from the work we undertake in our two mainstream environmental fields; water and agriculture, we also work with communities to enhance various other aspects of their environment, dependent upon the nature of local issues.

Notably, we have participated in the My Clean India campaign. You can read more about our endeavours [here](#).

We work to improve awareness amongst local communities and especially youth with regard to the importance of conserving our environment and natural resources for the

benefit of future generations.

Promotion of Agnihotra

The organization is encouraging Agnihotra in Meerut and other adjoining districts as a part of environment conservation programme. The relation between Agnihotra and farming has already been established and proved scientifically. For its growth, a plant takes approximately 98% of its nourishment from the atmosphere it breeds in and approximately only 2 % of it is taken from the soil. The farmers who practice organic farming take measures to ensure the soil quality; however, not much is done for keeping the surrounding atmosphere clean. Practicing Agnihotra ensures that the atmosphere is clean.

Scientific researches have proved that practicing Agnihotra even once in a day cleans 8000 sq. ft. of the atmosphere. Practicing Agnihotra in the agricultural fields not only cleans its surrounding atmosphere but also reduces the risk of insect-pest attacks on the crops. Since the crops are not at any risk from insect-pest attacks, the usage of pesticides is also nullified. Many farmers hailing from Meerut and the adjoining districts have been successfully adopting this technique in their fields. Janhit foundation has also conducted initial researches on this technique. It is worth mentioning that the National Horticulture Mission has included Agnihotra in their program in 2008. For the same NHM has selected two sites as the research farms in Meerut district and it is a matter of pride for the organization that both the sites selected are at the demonstration centres owned and developed by its farmers. This activity has already been initiated. At these research farms, other farmers would be informed about the benefits of Agnihotra and would also be detailed about its effects on their crops. The impact on the crops would be demonstrated to them on these farms. Before the inception of the promotion and practice of Agnihotra, two experts from Janhit Foundation took training for the same at Bhopal, which is the centre of initiation of Agnihotra and further envisage getting it included in the mainstream of organic farming.

For full details of projects which we have undertaken in this field, please [Click Here](#).

Environment Projects

Creating a balance between the rapid urbanization vis-a-vis growing air pollution and social forestry in Urban Meerut

Mitigation of air pollution in developing countries like India has emerged as one of the challenging tasks for environmental management agencies. The status is small towns is likely to become likely to become more acute with the continued and enhanced rate of expansion and increase in vehicular pollution and the limitations of carrying capacity of the respective environmental basins. India being a developing country, end-of-pipe treatment alone is not techno-economically feasible and control emission of vehicles is not feasible because of exorbitant costs. It is a known fact that green belts (GB) or vegetation around polluted areas mitigate air pollution (as the plants serve as a sink for pollutants and check the flow of dust, etc.) and reduce noise levels.

In 2002, Janhit Foundation conducted the Pollution study of Meerut in association with Centre for Science and Environment, New Delhi and the study revealed the presence of Suspended Particulate and Respiratory Particulate Matter in much higher quantities than permissible. Following this, Janhit Foundation went ahead with analyzing the cause of such high pollution levels.

Against this backdrop, Janhit Foundation did tree plantation and rainwater harvesting for the establishment and maintenance of a green belt in the school premises of City Vocational Public School, Meerut. As a part of the programme, following activities were conducted –

- An Enviro-Green Centre has been established wherein trees have been planted, with an active participation of students and community members offering their ‘shramdaan’. 300 trees of gulmohar, avla, anjir, satavar, sarpghandha, safed massoli, stivia, alovera, lemongrass, mangoe, guava, lemon, neem and peepalsata varieties have been planted. These plants and trees have been selected because of their medicinal value and survival rate as well as the fact that increasing the green cover increases oxygen.
- 1500 students have actively participated in voluntarily helping in tree plantation and maintenance of the trees and plants and the area in which they are planted. The green belt is now being maintained by the eco club in the school.
- A Rainwater Harvesting structure has been constructed which is now functioning as a live model. On an average, this structure harvests 80,000 litres of water annually which is further used by the school for different purposes.
- Interactive sessions have been held in the school to make the teachers and the students understand the importance of the project and to solicit their cooperation in the project.

Biodiversity Farm established at Meerut

Janhit Foundation being involved into the promotion of organic farming since its inception realized that alongwith promoting sustainable agriculture, there was also a dire need for enhancing the biodiversity of the state. The organisation came up with a project supported by The Royal Netherlands Embassy, New Delhi, wherein it envisaged setting up a model biodiversity farm in a nearby village (Bhatipura) in order to set an example for the farmers in and around to adopt the same and contribute in conserving the gradually diminishing biodiversity. The model farm was set up in 2007. The farm was constructed in a way that it included almost everything that would form a part of the natural environment. Through this model the organisation tried to form a natural eco system comprising of a small triangular pond, a hut made from straw and bamboo shoots, a farm spread across an area of 2 and a half acre of land, some organic manuring pits and structures, bee keeping boxes etc. Focus was laid on almost all aspects of traditional ways of farming keeping in mind the upcoming ways of income enhancement. The small pond was constructed to encourage fish rearing amongst the farmers and also to educate them about the importance of water and its judicious use in farming.

Apiculture, a new business trend has been encouraged for producing organic honey as an additional source of income. Floriculture, production of organically grown fruits, vegetables and pulses were also encouraged. Flowers like Gladiolas and Rajnigandha were grown in the farm alongwith fruits like mango, guava and jamun. Vegetables like potato, green leafy vegetables and pulses like arhar, urad and moong were also grown. Neem, jatropha, turmeric and stevia were also cultivated taking into consideration the rising demand of Medicinal and Aromatic Plants (MAPs). Promotion of intercropping was also a key objective of the project. The farmers were also enlightened about the low cost irrigation technologies available in the market. A rain gun was also installed into the farm to provide a live demonstration to the farmers. These technologies use water sparingly, thereby putting reasonable burden on the ground water resources. Preparation of organic manures with the use of on farm inputs like farm waste, cow dung, cow urine, rotten leaves etc. were also demonstrated to the farmers through the manuring structures like NADEP, LADEP and Cow Pat Pit (CPP). Also the composts like vermicomposts and liquid manures like vermiwash which are prepared with the help of the excreta of earthworms, were promoted. Other liquid manure models set up for the farmers' learning were jeevamrit and haritpaani, both derived from on farm inputs. The hut that has been constructed in the farm served as the training centre for the farmers who showed interest into adopting the concept in their farms as well. Continuous trainings were given to farmers to educate them about the importance of biodiversity and that each element forms an integral part of sustainable agriculture. Even if a single element goes missing the balance gets disturbed. Thus the project not only concentrated on increasing the biodiversity of the region but also on the enhancement of the soil quality, water availability, dependence on livestock and in the end towards the income enhancement of the farmer. The farm was developed by the organisation after getting inspired by the model farm developed by Deepak Shujde in Maharashtra.

CHILDLINE

1. Child rights protection

CHILDLINE is India's first 24-hour, toll-free emergency phone outreach programme for children in need of care and protection, connecting them to long-term care and rehabilitation facilities. Any youngster or concerned adult can dial 1098 at any time of day or night to reach the CHILDLINE service.

Meerut became the 73rd city to receive the service in August 2007, with the Janhit Foundation in charge of its deployment. The child or adult phoning on their behalf can access a variety of services by dialling 1098. We take a child-centered approach to development, in which children are active and leading participants in their own growth.

We were accepted into the Childline national network, which is a 24-hour helpline run by the Ministry of Women and Child Development and available in over 100 cities across India. We've been running the Meerut Childline since 2007, and it wasn't until 2020 that we were also assigned the job of looking after the Meerut Railway Childline. We receive over ten calls every day on average from children in distress from all over town as a result of this effort. Aside from that, we've been offering assistance to children from marginalised communities in the form of non-formal education, stationery, and school uniforms.

Our Children

1. Open House

Every month, Meerut CHILDLINE hosts an open house to raise awareness about the toll-free service and encourage local residents to come forward and take action to protect the rights of underprivileged children. The service hosted an open house at several sites throughout the city, including railway stations and bus stops. Singing songs, skits explaining the service, playing the 1098 theme music, and other activities are all performed by street children at an open house.

2. Canopy

Again, to raise awareness about the service, a canopy is set up in various locations. Members of the team distribute leaflets, brochures, and posters. They also speak with slum youngsters who come to the canopy and instruct them on how to use it. The canopy is erected at regular intervals in public venues such as the city railway station, medical institution, and so on. Exams for your health: The team also organises health examinations at regular intervals to maintain track of the children in the slum's health. The medical personnel that come to the slum Children in the slum are given free health checks. The youngsters are also given timely vaccines against polio, TB, and other diseases. The kids are also encouraged to keep their rooms tidy and sanitary.

3. Vocational trainings

The Meerut CHILDLINE team has gone above and beyond to provide vocational training to slum children in order to provide them with opportunities to make a life. The team has started sewing workshops for eight girls from underserved neighbourhoods who are being trained for free. Computer classes are also being held, in which six females are learning about information technology. Driving lessons have also been started for boys from the adjacent slums, so that by the time they reach the age of 18, they would be self-sufficient capable of sustaining a living. The management team also teaches the children a variety of crafts, such as candle making, card making, artificial flower manufacturing, and making décor things out of waste materials.

4. Outreach

The CHILDLINE team promotes the toll-free service by conducting outreach throughout the community. A special emphasis is placed on contacting all phone booth owners and telling them about the service so that they may help the programme succeed by spreading the word and allowing youngsters in need to use it for free.

5. Rescue of Child Labourers

Meerut CHILDLINE, in collaboration with the Meerut Police Department, rescued 80 children working as labourers on April 19, 2010 as part of its 'Operation Masoom' campaign. The majority of the youngsters rescued were between the ages of 7 and 14. These youngsters were temporarily housed at Bal Sadan (Child Shelter Home), and their addresses were traced and guardians contacted in the meantime. All rescued children, as well as their parents/guardians and the employers from whom they were taken, received counselling.

Women Rights Protection

Women's independence has been a priority for the Janhit Foundation. It is the organization's firm view that it should take on the role of providing basic comforts to society's underprivileged women. Since the world has begun to loosen the strict and unrealistic expectations placed on women, the Janhit Foundation has followed suit. We have made it our mission to educate women and help them understand their value so that they can contribute equally to the betterment of the world.

Major Programs

Health Programme

Because of illiteracy, superstitions pervade people's minds, preventing them from using toilets and forcing them to defecate in public places. Even after the government's successful attempt to establish toilets in various locations throughout rural areas, many people still refuse to use them. As a result, these health programmes are held in numerous locations to educate people about the need of hygiene. They are informed about the many illnesses that can infiltrate their houses as a result of these harmful behaviours.

Sanitary Napkin Distribution

There are still many women who are deprived of fundamental requirements, one of which is menstruation. Menstruation is a typical and monthly bodily process during which a woman sheds blood for a week. This monthly adjustment is a significant advancement that ensures the human-cycle remains in a loop. As a result, the organisation explains the naturalness of this procedure through this programme. We also teach ladies how to treat menstruation in a sanitary manner by not using cotton or fabric during this period. To guarantee a healthy practise, the proper use of sanitary napkins is taught and they are supplied on a regular basis.

Slowly but steadily, the company grew in stature and size, eventually settling in a two-story office facility with around 25 full-time salaried staff. Our original Director, Anil Rana, died unexpectedly in 2008, and Janhit Foundation has been managed by his wife, Ms. Anita Rana, since then. Ms. Anita Rana.

Janhit Mahila Helpline with a Panel of Experts on Women Rights

We started with an innovative support for the women for the district in the form of a Women Helpline through our organization which would register calls and problems from the women in distress across the district. The helpline is supplemented with a Panel of Experts with people from various aspects of life like education, law, career counselling, physiologists, social sector etc. who would be referred with the relevant cases and they would provide advisory to the beneficiaries and would try easy and implementable solutions to their problems.

In just about the start of the project, we have been receiving many cases through the helpline as the awareness about it is increasing.

If you are in Meerut, and are a women and facing any kinds of problems, call the Janhit Mahila Helpline on 0121- 4302021.

Agriculture Innovation

Innovation LADEP (Lalit and Devpal's Technology) – Organic Manure Production

One constraint, which although not yet fully accepted, despite being talked about, is that organic farming, requires huge biomass, which in most cases is generally not available. Consequently, agricultural scientists are reluctant to promote organic farming.

However, the farming community of Western Uttar Pradesh, unknowingly and ignorantly, finds it difficult to dispose of the huge biomass of Sugarcane leaves which they regard simply as waste. Furthermore, these leaves are then burnt, releasing carbon dioxide into the atmosphere, and thus contributing to

climatic change. Furthermore, this practice contributes to widespread soil degradation.

Janhit Foundation has created a technique where the farmers can benefit from the biomass contained in sugarcane leaves, by converting it to compost and thus forming manure. Our former fieldworker Lalit and our current Agricultural Coordinator Devpal Singh, have been responsible for the creation of this innovation, what is essentially a rich, organic manure, compiled with zero budget.

For one acre of land, the following is required:

- » Sugarcane leaves from one field (approx 1 acre) – Approx. 3 tonnes.
- » 2 tonnes of animal dung.
- » 2 tonnes of field soil.
- » 20000 litres of water.
- » Green weeds/biomass - 1 tonne.
- » Rock phosphate/ash - 60 kg.
- » Wooden sticks/timber (broken/chopped) - 2 quintals

The area required for the production of this manure is 25 ft x 8 ft x 5 ft. The manure (approx. 4-5 tonnes) will be ready for use within 5-6 months, depending on the season.

Harit Pani

Collect 25 kg of weeds (grown on roadside etc.). Chop it up with a dao. Place it in a big drum. Mix 500 gm gur (jaggery), 500 gm tamarind (imli) and 250 gm salt with the chopped biomass. Pour 100 litres of water into the drum so that it covers the ingredients. Stir daily with a stick. The mixture will decompose within 15-20 days. Strain it and use it as a spray or as a soil drench in 10% strength. This is ideal for farmers who do not have cows but still want to use organic manures for their fields and crops.

Rainwater Harvesting

Rain Centre

Rain Centres are a network of permanent exhibitions that seek to spread water literacy among urban Indians. They define the role played by every Indian citizen in harvesting rainwater and using it to combat the menace of water scarcity.

Janhit Foundation was responsible for establishing the second Rain Centre in the country, in Meerut, in 2004 in collaboration with the Centre for Science and Environment (CSE), New Delhi.

The Rain Centre building has a live model of rooftop rainwater harvesting with an area of 185m². It harvests a total volume of 110,437 litres of rainwater on average annually. The Rain Centre is intended to be a museum and a laboratory rolled into one. In short, the Rain Centre provides the know-how to the people for harvesting rainwater. It equips civil society to take leadership in the movement to conserve water.

Restoration of water bodies

Janhit Foundation has been working towards the conservation of water by traditional methods through community participation. It has undertaken a program to revive and promote existing and often historical, rural water resources structures such as ponds, wells and johads. Janhit Foundation strongly believes that water conservation can solve the drinking water shortage crisis, help to prevent further groundwater depletion and promote aquatic ecology through the provision of additional surface water bodies.

Such measures can only be truly effective with the participation of the local community. Janhit Foundation visits many villages on a regular basis to promote continued conservation of water resources and remind the people of the historical cultural heritage that is reflected in the age-old natural water structures.

Rainwater Harvesting Consultancy

Janhit Foundation has the in-house knowledge to undertake external consultancy work within the wider community to help establish rainwater harvesting structures on a large scale. We have trained employees who are competent in the design and install of rainwater harvesting structures, having received specific training from the Government of India's Central Groundwater Board.

For further information in this regard, please contact us directly on 0121-400123.

Gyanashram (School For Knowledge)

A team of Janhit Foundation visited two slums in Shastri Nagar locality in the month of July to ascertain the conditions prevailing in that area. When the team enquired about the children living there, they concluded that most of the children do not attend school and those who attended were in lower grades as compared to their age. Their living standard was pitiful and they lacked general knowledge and basic awareness. Their basic educational needs could not be met since they belonged to the lower strata of the society and their poor parents could not afford to send them to schools. The children were being deprived of the basic right to education.

Taking care of the poor, deprived children of the two slums, Meerut CHILDLINE team initiated two informal schools this year for the children of the marginalized groups. Named Gyanashram (School for knowledge), these informal schools take care of about 100 children, who are mainly dropouts.

Janhit Foundation has come forward via constructing a bamboo hut in order to provide a classroom where the slum children are taught daily. Another hut is being planned for construction in the other slum.

Two staff members of the organization regularly teach these children about the culture of our country, environmental issues, Indian National Movement, hygiene and sanitation, first aid, general knowledge and related issues through interesting modes and games. About a dozen dropout children have been enrolled in a local school with people's participation thus providing them the opportunity to avail their right to education. Health camps are regularly organized in these slums and a centre has been opened by the local Anganwadi to provide mid-day meal to the children. Vocational training is also being imparted to these children by the staff of the organization. The girl child (specifically amongst the marginalized groups) is generally denied any kind of training or education. Janhit as well as Meerut CHILDLINE encourage the empowerment of the girl child and therefore as a part of the vocational courses, the girl students from the slum are provided with computer and tailoring classes. Training for other activities like candle making and card making for commercial purposes, is also imparted to the children.

The staff does not miss any opportunity to provide knowledge to the children about the National festivals. All the festivals are celebrated with them.

Tremendous response has been received by the organization, for initiating this innovative activity, from various stakeholders. To give an example, doctors, especially from Subharti Medical College, Meerut, have volunteered to conduct regular checkups for these children. A leading Psychologist of Meerut, Dr. Mridula Sharma, regularly visits the slums in order to take care of the psychological needs of the children. The Inner Wheel Club of Meerut has come forward to donate floor mats and a blackboard for the children along with stationery. The Para professional and two team members of Meerut CHILDLINE regularly visit the slum daily and teach the children.

With the efforts of Meerut CHILDLINE, an Anganwaadi Kendra has also started in the same locality where the children of the age group 3-6 are taught as well as provided with mid-day meal.

After successfully establishing the initial Gyan Ashram and spreading informal education to over 50 children through the work conducted there, the foundation went ahead with taking the kind initiative a step ahead by establishing a second Gyanashram in another slum in the Shastri Nagar locality. It was established in July 2008 and has been able to associate with over 100 children in all, targeting those who have been denied any form of formal education due to poverty of the parents.

Our Awards

Leadership in community initiative for a green economy - UNDP award (2012)

Janhit Foundation's Director, Anita Rana, received this prestigious award from the UN Development Programme at the 2012 Delhi Sustainable Development Summit. The award was presented by the UNDP's Country Director, Caitlin Wiesen.

Valuable work in support of earth day network's campaign - Women And The Green Economy (2012)

Janhit Foundation's Director, Anita Rana, was honoured to have her and her organization's work recognized by the Earth Day Network at the Delhi Sustainable Development Summit, 2012.

Green Apple Award (2009)

Janhit Foundation has been declared as one of the major winners of the prestigious 'Green Apple Environment Awards' for their outstanding contribution and work towards environment issues, by UK based 'The Green Organisation'.

One World Award (2008)

Janhit Foundation had been conferred the prestigious 'One World Award' for its outstanding work in the field of organic agriculture. This important award promotes engagement for a fair and sustainable globalization. It honours outstanding people who show passionate engagement and major accomplishments to make this planet a better place, people who give examples of positive globalization using innovative ideas and dedication, people who make the future worth living.

Appreciation Certificate (2008)

An Appreciation Certificate was presented to Janhit Foundation by Ms. Lizzette Burgers, WES Chief, UNICEF and the Country Representative of Water Aid, Mr. Depinder Singh Kapur for promoting public awareness and contribution to collective action for sustainable solutions in New Delhi on March 8, 2008. The certificate was awarded on the occasion of World Water Day and the International Year of Sanitation, New Delhi 2008.

Addressing 'Parliamentary Forum On Water' (2008)

An Appreciation Certificate was presented to Janhit Foundation by Ms. Lizzette Burgers, WES Chief, UNICEF and the Country Representative of Water Aid, Mr. Depinder Singh Kapur for promoting public awareness and contribution to collective action for sustainable solutions in New Delhi on March 8, 2008. The certificate was awarded on the occasion of World Water Day and the International Year of Sanitation, New Delhi 2008.

'Waterman Of UP' (2008)

On the occasion of Ground Water Day on 10th June 2008, the Founder Director of Janhit Foundation, Late Sh. Anil Rana was honoured with the title of 'Waterman of UP' and was certificated in recognition for his outstanding contribution by the Government of Uttar Pradesh in a seminar hosted by the Ground Water Department, U.P..

Nari Shakti Award (2015)

On woman's day –NARI SHAKTI AWARD 2015 by DR. Sarojni agarwal MNC Meerut and Suman yadav, member of woman commission U.P

Nari Shakti Award (2016)

On woman's Day 2016 - Nari Shakti was awarded by State Minister Kuldeep Ujjwal.

Woman of Substance

Meerut management association awarded Ms. Anita Rana woman of substance from District Magistrate Meerut Mr. Navdeep Ranwa.

Malala Award

Malala Award was given by U.P govt. and Hindustan Media to encourage women for advocacy of women and social rights.

Organic Aaharam

Janhit Foundation established Meerut City's first exclusive organic outlet in western UP on June 12, 2007.

This outlet was set-up with the objective of providing a direct link to the local market for our organic farmers, those who have participated in our agricultural projects. This outlet provides financial encouragement to those farmers practicing organic agriculture, whilst providing nutritious, chemical-free food to the local community.

We would like to thank Ford Foundation for their financial support, without which this would not have been possible. Our produce is organically certified by the Uttaranchal State Government, and our stock is currently supplied by over a hundred member farmers. A full stock and price list is available for [Download Here](#). For any further details, please contact our Organic Aaharam.

Outlet Address:-
DC-7, Shastri Nagar, Near Arya Samaj Mandir,
Meerut (UP), India
Phone : +91-121-4023488
Email id :- organicaaharam@gmail.com

Give As You Earn

Janhit Foundation is a partner in Give as You Earn, CAF India's payroll giving programme which offers companies and their employees an easy and tax-effective way of giving to the cause and NGO of their choice through payroll. As a part of this innovative programme, we have undertaken a number of activities for various target groups.

Vocational Training at Bal Sadan

Under the various projects taken up by Janhit Foundation, is a project run under the aegis of CAF titled 'Give as You Earn Programme'. The foundation has taken up a project to facilitate learning of the computing skills to the children of Bal Sadan, A government child observation home at Meerut. About 30 students were given a training for three months to learn the basics of computers alongwith Word, Excel, Paint Brush etc. Mr. Ghulam Mohammad taught the children how to use computers. The teaching of these basic concepts will instill

confidence in these deprived children of the society and gradually they can become computer savvy as computer literacy is the need of the day. In this process the foundation provided one computer also to make the learning process all the more convenient and the deadline to be achieved.

Providing the skill of earning will take these students to a future where a livable life could be thought of.

Helping the Deprived – Mission 'Enable'

"By compassion we make others misery our own and so by relieving them, we relieve ourselves also:" – Sir Thomas Browne

The organisation benevolently thought of the plight of the disabled children at Gyan Ashram and at other places for whom life was a burden. Meerut CHILDLINE under the aegis of Janhit Foundation gave the disabled a partner to share and those were the devices as wheel chair, listening machine,

crutches, a walker. These transformed the ten privileged children from disabled and enabled them to atleast bear the brunt of destiny.

It was in the august presence of the Chief Guest Mr. Subodh Kumar, Chief Medical Officer, Meerut and distinguished suests Ms. J.B. Gaur, D.P.O., Meerut that these enabling devices were given to the physically challenged children. Rahul and Bhoore got the tri-cycle to chase their dreams, Shehzad and Lalit Kumar were gifted crutches to be independent in their working, Vicky was given a walker to reduce the burden of his parents, Tinku was given a handstick to stand upright and with confidence. Furthermore, Praveen, Sagar, Neelam and Manisha were given hearing machines for hearing impaired. The children not only received these devices but a bag of confidence alongwith. The foundation acknowledge the funding partner Charities Aid Foundation and promised to 'ENABLE' more needy people as and when an occasion arises.

Free Medical Camp for the Poor

Jaibheem Nagar in Meerut city has population of over 10,000 mainly comprising of slum dwellers with an economically, socially marginalized, schedule caste community. The slum is sandwiched between LLRM Medical College on it one end which discharges its untreated toxic wastes in the water supplies and on the other side with highly polluted Kali River (East). There is a gross violation of Human Right to Water of the residents living here compounded by a complete lack of basic medical facilities to help the sick and dying. The population of Jaibheem Nagar has been reporting an

alarming rise in serious ailments and increased death rate over the last decade. The drinking water sources available to the population are confined as failing to meet National and International standards for safe drinking water due to contamination with a range of toxic heavy metal parameters and as such as unfit for human consumption.

Keeping in view the mentioned scenario, Janhit Foundation conducted a few medical camp at Jaibheem Nagar wherein a team of reputed senior doctors from Subharti Medical College, Meerut visited the slum for medical check up. Free medicines were also provided to the patients after check up.

Educational Support to Slum Children

A slum community is located near the office premises of Janhit Foundation in the Shastri Nagar locality. A few children living in the slum go to school while others help their parents in daily household activities because of their poor economic conditions.

Janhit Foundation has sponsored school dress for five children of the slum enabling them to go to school. These children were not willing to go to their schools as they were daily scolded by

their teachers for not wearing proper school uniform and felt ashamed of being reminded everyday at the school for the dress in front of their other friends.

All the five children are now happy studying at their schools and feel comfortable joining the other children at the school who come from a comparatively good family background.

Material Donation to the Children in Need

A small gift means so much to a child that has so little. Janhit Foundation donated clothes, books, toys to 100 needy children during the Christmas period in poor areas of Meerut district. The children felt happy and excited receiving the gifts. Biz Bazaar also associated with the organization in the cause and sponsored food and refreshment during the donation programme for all the kids.

Training for small scale farmers

100 farmers of Rohta block have been provided with practical training on producing organic manures and bio-pesticides on their own farms using locally available material.

Resource persons were invited who gave a presentation on the subject and were given practical demonstration on the preparations. The farmers have benefitted a lot from the trainings as they were totally dependent on non-organic inputs for their crops which were bought from the markets and posed a great economic burden on their pockets, increasing their cost

of production. The farmers who are now using organic inputs have also witnessed a better yield alongwith net profits.

My Clean Meerut

Beauty & Prosperity through Community

Instilling leadership among young people & creating a team of people responsible for their actions and able to inspire others.

Janhit Foundation has launched the 'My Clean Meerut' campaign which aims to reach the people the Meerut City and inspire them to show their love and pride for the environment. This is an association with 'My Clean India', a campaign which was embarked on by Mr. Remco Van Santen from Australia. It was from Nainital that he lighted the spark in the minds of people and joining hands with others like Janhit Foundation in solidarity the campaign is moving ahead in 17 cities of India with about 35 million people joining. The campaign being launched in Meerut is another step towards a better India through promoting the spirit of UN Agenda 21, 25. The youth have so much to offer.

My Clean Meerut encourages people to take personal responsibility and by that, together finding ways to keep their environment clean and green. This campaign is not just about less litter and rubbish although that is very important but also for cleaner air, cleaner water, cleaner soil, and even a cleaner mind and relationships.

Broadly, there are two key aspects to My Clean Meerut.

- It focuses on community achievements to inspire to create sustainable change.
- It focuses on the problems but also aim to show the innovative, successful and inspirational achievements and promote dreams of what could be accomplished.

What's Special About It?

Traditionally, we focus on identifying problems and then listing the resources (and money) required to fix them. This results in dependency and no responsibility for the problem. When the money dries up, the problem recurs.

This campaign is about Appreciative Inquiry i.e. shift from problem solving to building on the solutions and positives such as achievements and our community strengths and skills.

We do not use the word "should" and "try". Again and again we just point fingers to problems. But what actually would work is an acknowledgement and appreciation of people power and local solutions and efforts being made, looking at what is working; what is not working; and what is necessary to make it happen.

My Clean School

- My Clean Meerut and My Clean School working together. Here we look how My Clean School investigates and creates opportunities to work with My Clean Meerut to promote those who make the environment more prosperous and beautiful.

- The United Nations has Agenda 21 that promotes the youth for caring for the environment. The youth, with their vigour and independence can look objectively to what can be done. The represent energy while at same time, develop their leadership skills.

- MCS enables the schools to be role models for their communities in cleanliness and by interacting with the community, for the students to practice leadership and innovation. Progressive Inquiry is a three step process the students can employ to identify what could be done.

- Progressive Inquiry is used by My Clean School and is in three steps.

- What is liked.
- What is not liked.
- What needs to happen.

This represents an opportunity for students to work with the community and practice leadership.

- Progressive Inquiry is a progressive which uses the scholastic background of the students to explore the community and to identify the opportunities for action and those that are making a difference – the champions.

To read more about this campaign, please [click here](#).

As a part of 'My Clean Meerut', Janhit Foundation had organised Inter-school Essay Writing, Debate and Poster Making Competition. About 16 schools participated in the event, with about 150 students writing essays, making posters and speaking on the issue of My Clean Meerut. This included participation of not only CBSE schools but government schools and colleges; and schools from rural areas too. The competition was organised on November 29th and 30th, 2009 in the premises of Sanatan Dharma Inter College, Meerut.

Impact:

The clear and positive spirit of the competition influenced the schools and we got a very good participation from most of the schools.

The participation was with all the spirits high, with all the enthusiasm and vision the young eyes carry within them.

It is true that only few won the prizes but all the participants were appreciated and encouraged by giving away a certificate from the foundation. So that they don't stop thinking about the environment.

Topics for the Competition

- Essay Writing:- 'Main apne shahar Meerut ki zameen, pani aur hawa ko saaf banane ke liye kya krna chahta/chahti hu, main ye kaise krunga/karungi?'
- Poster Making:- 'Apne shahar Meerut ki zameen, pani aur hawa ko saaf banane ke liye 'mujhe' kya krna hoga?'
- Debate Competition:- 'Mere shahar Meerut ki zameen, pani aur hawa ko saaf banana kya sarkar ki zimmedaari hai ya meri khud ki?'
- For:- 'Meri apni zimmedaari hai.'
- Against :- 'Sarkar aur prashaasan ki zimmedari hai.'

Winners:

Debate:

Ist Nisha Gulpham of Meerut Public Girls School (Senior)

Somya of Delhi Public School (Junior)

2nd Khushmani Kaur of Delhi Public School (Senior)

Suraj Singh of D. N. Inter College (Junior)

3rd Shwetanki of Meerut Public School (Senior)

Sanjeev Kumar of Army School (Junior)

Essay Writing:

Ist Ekta Kumari of Army School (Senior)

Ishika Bansal of Meerut Public School (Junior)

2nd Shivani Godara of Meerut Public School (Senior)

Rimjhim Sharma of R. G. College (Junior)

3rd Ashish Gupta of S. D. Inter College (Senior)

Shalini of R. G. College (Junior)

Poster Competition:

Ist Priya Tyagi of Army Public School (Senior)

Joy Verma of Meerut Public Girls School (Junior)

2nd Adiba of Meerut Public Girls School (Senior)

Akansha of R. G. College (Junior)

3rd Shalini of Kanya Inter College, Daurala (Senior)

Sman Singh of Army Public School (Junior)

Water Conservation & Awareness

In Uttar Pradesh, the Janhit Foundation takes a novel method for dealing with water shortages. This strategy is centred on ensuring that all of our efforts in this field benefit the people who live in our society while also improving environmental circumstances.

Water conservation

We devote a significant portion of our efforts on preserving and revitalising natural water supplies. Uttar Pradesh has a network of rivers, ponds, and canals, although encroachment is prevalent, and many of them are dry. We have been working with a variety of partners to rejuvenate these buildings so that communities can use them for agricultural and other uses.

As a remedy to the ever-increasing water crisis, we promote the adoption of clean technology such as rainwater collection. This helps to replenish the region's depleted groundwater levels while also supplying excess water for home usage.

Mitigation of water pollution

In India, waste dumping from industrial facilities is prevalent. At the moment, the legal system poses little threat to industries that pollute the environment on a regular basis.

As a result, water contamination is a serious issue, with many industries releasing untreated waste water directly into the groundwater and the region's many rivers. The Janhit Foundation aims to address these issues by providing factual proof of the harm that the industry has caused to the environment and, in many cases, human health. Many success examples exist where this action resulted in a community cooperation between industry and local residents to address environmental challenges.

Major Programs

2nd Rain Centre in India – This was one of its kind water library with educative panels, books, videos etc. on water set up by the organization in Meerut.

Revival of Water Bodies– We have revived over 25 water bodies in Meerut, Ghaziabad & Sonapat with an average of 3 water bodies an year.

Promotion of Low-Cost Water Efficient Techniques among the farmers.

Created a Water Census of the region in 2003 and again in 2013 for the region.

- Rainwater Harvesting – in multiple government and private buildings in the region.

For full details of projects which we have undertaken in this field, please [Click Here](#).

HILDLINE

1. Child rights protection

CHILDLINE is India's first 24-hour, toll-free emergency phone outreach programme for children in need of care and protection, connecting them to long-term care and rehabilitation facilities. Any youngster or concerned adult can dial 1098 at any time of day or night to reach the CHILDLINE service.

Meerut became the 73rd city to receive the service in August 2007, with the Janhit Foundation in charge of its deployment. The child or adult phoning on their behalf can access a variety of services by dialling 1098. We take a child-centered approach to development, in which children are active and leading participants in their own growth.

We were accepted into the Childline national network, which is a 24-hour helpline run by the Ministry of Women and Child Development and available in over 100 cities across India. We've been running the Meerut Childline since 2007, and it wasn't until 2020 that we were also assigned the job of looking after the Meerut Railway Childline. We receive over ten calls every day on average from children in distress from all over town as a result of this effort. Aside from that, we've been offering assistance to children from marginalised communities in the form of non-formal education, stationery, and school uniforms.

Our Children

1. Open House

Every month, Meerut CHILDLINE hosts an open house to raise awareness about the toll-free service and encourage local residents to come forward and take action to protect the rights of underprivileged children. The service hosted an open house at several sites throughout the city, including railway stations and bus stops. Singing songs, skits explaining the service, playing the 1098 theme music, and other activities are all performed by street children at an open house.

2. Canopy

Again, to raise awareness about the service, a canopy is set up in various locations. Members of the team distribute leaflets, brochures, and posters. They also speak with slum youngsters who come to the canopy and instruct them on how to use it. The canopy is erected at regular intervals in public venues such as the city railway station, medical institution, and so on. Exams for your health: The team also organises health examinations at regular intervals to maintain track of the children in the slum's health. The medical personnel that come to the slum Children in the slum are given free health checks. The youngsters are also given timely vaccines against polio, TB, and other diseases. The kids are also encouraged to keep their rooms tidy and sanitary.

3. Vocational trainings

The Meerut CHILDLINE team has gone above and beyond to provide vocational training to slum children in order to provide them with opportunities to make a life. The team has started sewing workshops for eight girls from underserved neighbourhoods who are being trained for free. Computer classes are also being held, in which six females are learning about information technology. Driving lessons have also been started for boys from the adjacent slums, so that by the time they reach the age of 18, they would be self-sufficient capable of sustaining a living. The management team also teaches the children a variety of crafts, such as candle making, card making, artificial flower manufacturing, and making décor things out of waste materials.

4. Outreach

The CHILDLINE team promotes the toll-free service by conducting outreach throughout the community. A special emphasis is placed on contacting all phone booth owners and telling them about the service so that they may help the programme succeed by spreading the word and allowing youngsters in need to use it for free.

5. Rescue of Child Labourers

Meerut CHILDLINE, in collaboration with the Meerut Police Department, rescued 80 children working as labourers on April 19, 2010 as part of its 'Operation Masoom' campaign. The majority of the youngsters rescued were between the ages of 7 and 14. These youngsters were temporarily housed at Bal Sadan (Child Shelter Home), and their addresses were traced and guardians contacted in the meantime. All rescued children, as well as their parents/guardians and the employers from whom they were taken, received counselling.

Rainwater Harvesting

Rain Centre

Rain Centres are a network of permanent exhibitions that seek to spread water literacy among urban Indians. They define the role played by every Indian citizen in harvesting rainwater and using it to combat the menace of water scarcity.

Janhit Foundation was responsible for establishing the second Rain Centre in the country, in Meerut, in 2004 in collaboration with the Centre for Science and Environment (CSE), New Delhi.

The Rain Centre building has a live model of rooftop rainwater harvesting with an area of 185m². It harvests a total volume of 110,437 litres of rainwater on average annually. The Rain Centre is intended to be a museum and a laboratory rolled into one. In short, the Rain Centre provides the know-how to the people for harvesting rainwater. It equips civil society to take leadership in the movement to conserve water.

Restoration of water bodies

Janhit Foundation has been working towards the conservation of water by traditional methods through community participation. It has undertaken a program to revive and promote existing and often historical, rural water resources structures such as ponds, wells and johads. Janhit Foundation strongly believes that water conservation can solve the drinking water shortage crisis, help to prevent further groundwater depletion and promote aquatic ecology through the provision of additional surface water bodies.

Such measures can only be truly effective with the participation of the local community. Janhit Foundation visits many villages on a regular basis to promote continued conservation of water resources and remind the people of the historical cultural heritage that is reflected in the age-old natural water structures.

Rainwater Harvesting Consultancy

Janhit Foundation has the in-house knowledge to undertake external consultancy work within the wider community to help establish rainwater harvesting structures on a large scale. We have trained employees who are competent in the design and install of rainwater harvesting structures, having received specific training from the Government of India's Central Groundwater Board.

For further information in this regard, please contact us directly on 0121-400123.

Sustainable Agriculture

Throughout the last decade, the Janhit Foundation has promoted organic agriculture as a viable and sustainable alternative to conventional farming practises.

Toxic agrochemicals are heavily used in conventional agriculture, and they enter the food chain, seep into water sources, injure cattle and wildlife, deplete the soil, disrupt natural ecosystems, and contaminate the agricultural crop for which they were originally introduced.

Organic farming practises improve soil quality year after year, resulting in more fruitful land. This improves the farmer's long-term yield, nutrient value, and potency of their crops.

We work with small, marginalised farmers all throughout the region to help them increase their revenue by lowering input costs and switching to organic farming. Because sugarcane is the primary crop grown in Western Uttar Pradesh, we've worked closely with sugarcane farmers to encourage them to use fewer toxic Persistent Organic Pollutants (POPs) and to provide them with innovative technologies and agricultural techniques to improve their crop and increase yield.

We have been encouraging farmers in the region to embrace organic and natural farming practises in order to protect the environment, soil quality, subsurface water quality, and the health of agricultural yield consumers. We work with around 2000 farmers in the district and have completed a number of initiatives with them.

Major Programs

1. From Seed to Market– This was a 3-year project supported by Ford Foundation which promoted organic farming among marginalized farmers selecting 400 farmers and providing them from seed to regular trainings to Compost Pits to Jeevamrit to Certification and finally Market for their Organic Produce.
2. Demotivating Farmers to use Lindane and Endosulphan – This was a project where we introduced farmers to organic manure LADEP to make them leave using these really harmful chemicals in farming.
3. Soil Testing This was done in 210 villages across Meerut to start a research-based dialogue with the farmers.
4. Biodiversity Herbal Gardens in SD Public School, Muzaffarnagar and Godwin Public School, Meerut.
5. Promotion of Cultivation of Lemongrass, Citronella & Neem with the farmers providing them market for the same leading to their income generation manifold.

Get Involved

“Alone we can do so little; together we can do so much.”

Thank you for showing your interest in volunteering with us. Please fill in the form below and we will get back to you with a suitable opportunity.

Janhit Foundation recognises that the complex issues confronting modern India can only be addressed when the government, civic society, people, and businesses join forces and collaborate. To avoid failures and increase the chances of success, a broad lens approach that includes many more partners has become essential. The call to combine all stakeholders' efforts and talents to increase the impact of poverty reduction and social inclusion programmes is becoming increasingly vocal, and Janhit Foundation is trying to achieve this aim through collaborations.

The Janhit Foundation oversees the complete life cycle of social impact programmes in order to increase on-the-ground effectiveness. Individuals and organisations have been able to give more, more securely, and more effectively, and we've provided support to make a difference in people's lives. Our philosophy in teamwork has allowed us to increase our giving while also recognising that we can work better together and have a greater social effect. We foresee a future together that is motivated not by a catastrophe, but by the desire to improve our society. We can make a genuine difference in the lives of millions of people in need if we work together. We may improve programmes by focusing on impact-driven, macro results rather than micro-activities and expenditures.

Employee Giving Program

The Janhit Foundation oversees the complete life cycle of social impact programmes in order to increase on-the-ground effectiveness. Individuals and organisations have been able to give more, more securely, and more effectively, and we've provided support to make a difference in people's lives. Our philosophy in teamwork has allowed us to increase our giving while also recognising that we can work better together and have a greater social effect. We foresee a future together that is motivated not by a catastrophe, but by the desire to improve our society. We can make a genuine difference in the lives of millions of people in need if we work together. We may improve programmes by focusing on impact-driven, macro results rather than micro-activities and expenditures.
