

NEWSLETTER

AUGUST 2009

Janhit Foundation is an independent, not-for-profit non-governmental organization, actively engaged in the promotion of human welfare through environmental protection since 1998.

Key areas of work include:

- Groundwater quality protection for human health
 - Provision of safe drinking water to marginalized communities
 - Protection of river water quality for aquatic ecosystems
 - Enhancement of available water resources through water conservation measures
 - Promotion of sustainable agriculture by organic farming methods
 - Environmental education and empowerment of local communities

Janhit Foundation undertakes this work through scientific research, campaigns, advocacy and grass-root level community involvement.

As a public interest organisation, Janhit Foundation focuses on strengthening local communities through their active participation in decision making, to achieve sustainable development. We believe that environmental degradation can only be addressed adequately if local people are empowered in decision making at all levels and have control over resources.

To achieve our goals, we work in partnership with government, non-governmental, national and international organisations on environmental and human rights issues.

OUR VISION

- Local People's participation
- Their empowerment in decision making
- People's control over Resources

In order to find solutions to environmental degradation and make it a better place to live in. We also strive for sustainable development.

OUR MISSION

Janhit Foundation envisions to work towards a pollution free world where every individual can have a healthy existence and promotes sustainable development in every sphere. Through its local and national initiatives Janhit Foundation links up to global initiatives and believes in creating positive global impacts.

And comments.*

GEOGRAPHICAL SCOPE OF THE ORGANISATION

The Janhit Foundation is working in the Indo-Gangetic alluvial fed states of India, i.e. in Western Uttar Pradesh, Punjab and Haryana. Its Area of focus in Uttar Pradesh is primarily Meerut, Baghpat, Ghaziabad and Muzaffarnagar.

FROM THE DIRECTOR'S DESK

“I am pleased to be bringing to you all this issue of our newsletter and wish you all a very happy reading.

I would like to thank all those who attended the 18th Tribute Function marking the 1st anniversary of the death of my husband Shri Anil Rana Ji and the respect paid to him and his work.

I would again like to offer my personal congratulations to the award winners, Sukhpal Singh and Army Public School, it was a tough choice but you are worthy winners”.

HIGHLIGHTS OF THE THREE MONTHS MAY- JULY 2009

World Environment Day, 5th June 2009

Janhit Foundation participated in the Tree Plantation Drive organised by 'Hindustan', a major Hindi daily newspaper. Ms. Anita Rana planted 10 trees in the Chaudhary Charan Singh University Campus. She was invited to attend the event as 'Guest of Honour' alongwith Professor S. K. Kak, Vice Chancellor CCS University Meerut, who was the Chief Guest along with other dignitaries. In addition to this event the Foundation staff spent the day sharing their thoughts and opinions on the environmental issues India is facing and the possible ways to tackle them. There were poetry recitals and songs sung as well as making oaths to plant trees on an annual basis and nurture them.

Strengthening the Association with the Stakeholders, 27th June 2009

One of our important projects 'Elimination of Persistent Organic Pollutants (POPs) namely Lindane and Endosulphan through promotion of the use of bio-pesticides and organic manures through sustainable agricultural practices in Meerut and Muzaffarnagar districts of Uttar Pradesh' is passing through the last phase of the initial plan. This project aimed at analysing the differences being brought in the quality of soil and yield by the end of two agricultural seasons by analysing the soil sample tests pre and post the project.

One of the important aims of the project was to intervene at the policy level and get these deadly pesticides banned in India

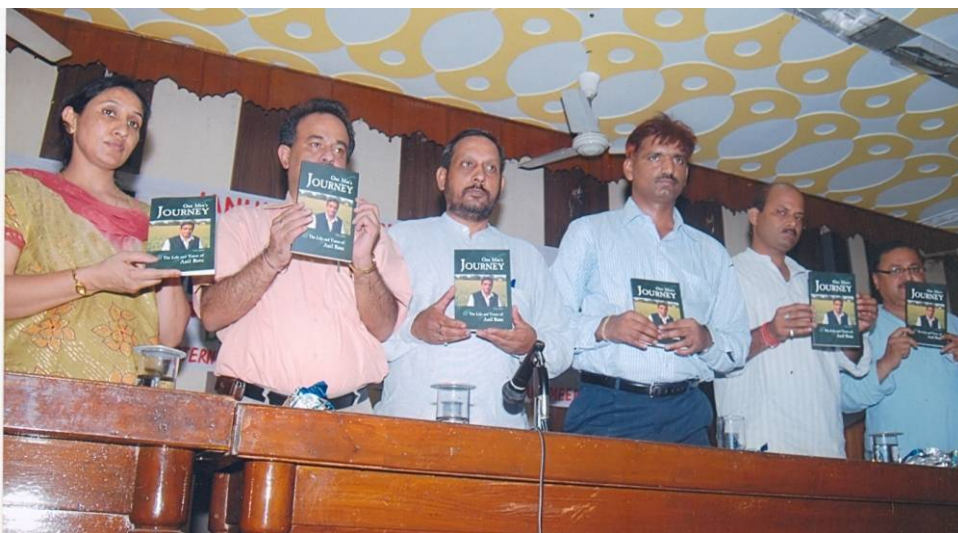

and for the same the support of the stakeholders is indispensable. Thus a liaison with stakeholders was being developed through regular meetings. On 27th June 2009, Janhit Foundation hosted the 5th Stakeholders Meeting in its office which was attended by over 35 delegates including farmers, sugar mill owners, bio-pesticide and fertiliser companies and academics.

The meeting started with a presentation on the Organisation and the project. It was followed by a discussion on the roles of various stakeholders and their envisaged contribution to the success of the project. The

meeting was a success as an oath marking non usage of these deadly pesticides and rather motivating the sustainable and more eco-friendly pesticides throughout the region was taken by most of the participating delegates. This will mark a major impact on their usage. Moreover the soil sample analysis prior and post project were also discussed which convinced the stakeholders to contribute towards the policy intervention the project has envisaged.

Marking the Anniversary of the Death of Shri Anil Rana

Janhit Family lost its founding Director on the fateful date of 18th July 2008. Marking the first anniversary of the death was an important milestone for the Foundation and an opportunity to celebrate and pay homage to his life and achievements. An important part of this ceremony was the

launch of a biography compiled by members of the Janhit Team along with many of his friends and former colleagues.

The book titled 'One Man's Journey: The Life and Times of Anil Rana' tells the story of his dream and passion to establish a more fair and just society through the work he started as Janhit Foundation. The book comprises 5 chapters spread over 100 pages. References made are to his early life establishing of the Foundation, his passions for his family

and the Foundation as well as many thoughts and opinions of those who knew him.

The book was launched at a ceremony hosting friends and family and those associated with Shri Anil Rana and the Janhit Foundation throughout his life. K. K. Roy kindly agreed to host the function and was joined on the stage by Mrs Anita Rana the current Director of the Janhit Foundation, Mr Praveen Mishra SDM, Meerut, Dr Kaushal Sharma; Kirorimal College, Dr. D Chakraborty; Central Ground Water Board and Dr Anupam Pandey. All the guest made personal tributes as well as offered shradhanjali to his picture by offering flowers. A presentation was given on Shri Anil Rana's life by Dr D Chakraborty and Ms. Priti Elhence.

In addition to this, two awards were given in memory of Shri Anil Rana. The function was well attended and many of the guests contributed with their own personal tributes to Shri Anil Rana and the Janhit Foundation sharing their experiences and associations with the great soul safe now in his heavenly abode.

Shri Anil Rana Memorial Award 2009

This award was initiated in the memory of Sh. Anil Rana on his first anniversary of death. This was an acknowledgment of

the outstanding contributions of Institutions and the organisation towards Environmental Protection and Conservation. Janhit Family chose Environment as focus of this award as this was one subject too close to the heart of Shri Anil Rana. This year, it was decided by Ms. Anita Rana and the Janhit team that the focus should be on the schools located in the district. All the schools were invited to apply in the form of a write up explaining their contributions towards the protection and conservation of environment. 6 schools were shortlisted as finalists Army School Meerut Cantt; J P Academy, Mawana

Road, Meerut; Delhi Public School, Baghpat Road, Meerut; City Vocational Public School, Meerut Cantt ;International Public School, Meerut Cantt and International Public School, Ganganagar. Each School was accorded with a Certificate of Appreciation and the winners Army Public School was also given a Trophy. It was a tough job first shortlisting the schools and then selecting the best was in no way an easy task. The decision was so close that the jury reached to the best almost after two hours of intense discussions.

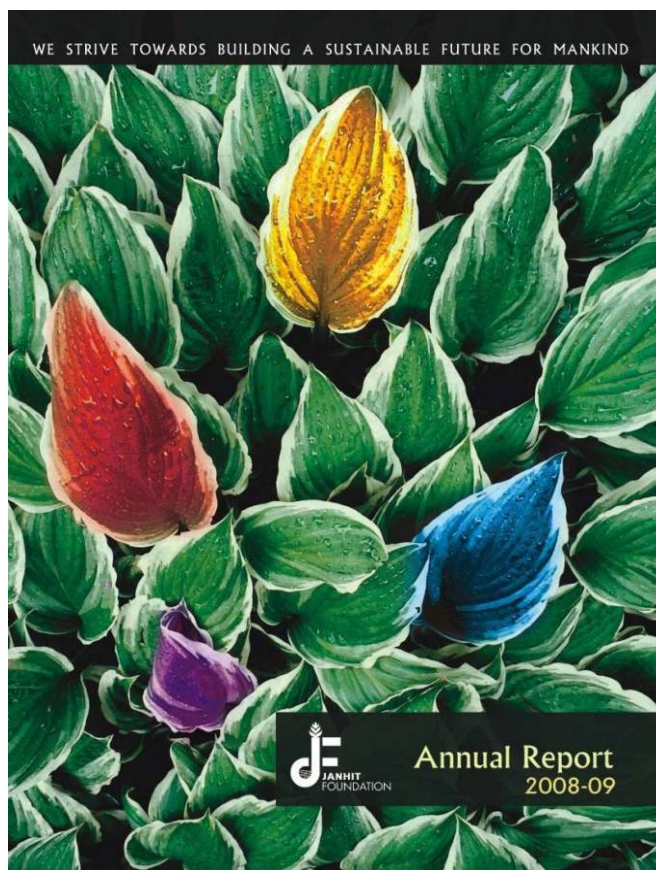

Shri Anil Rana Smriti Sarvshreshtha Kisan Puraskar 2009

Since 2003 Shri Rana has been committed to promoting organic farming as the sustainable alternative to the harmful chemical practices prevalent in the state today. It was with his hard work, that he was able to bring in many innovative projects in the region and motivated over 500 farmers to accept the transition to Organic Farming. His dream could not have been realised without the unconditional support extended by the farmers. Their hardwork is worth appraisal and thus this award, to respect the commitment of Sh. Rana as well as the participating farmers, was initiated by

Janhit family in the memory of its founder. After of a lot of scrutinies 11 farmers were chosen from various villages around Meerut. The 11 nominees were Sukhpal Singh, Pooth; Bijender Singh, Dhanpura; Rambir Giri, Khatki; Munnalal Saini, Khatki; Ramchander, Kaleena; Omkar Singh Sindhu, Gesupur; Virender Singh, Bhatipura; Kanti Tyagi, Khandravali; Vinay Tyagi, Attrada; Rajpal Singh, Ganwadi and Prem Chand Sharma, Khaspur.

It was a tough job to find the best out of them for the panel of the jury. Each finalist was presented with a shawl and certificate of appreciation as a token of respect. The winner Sukhpal Singh was also awarded a cash prize of Rs. 5000.

Annual Report Released for the Financial Year 2008-09

July saw the release of the Janhit Foundations Annual Report for 2008-09. The annual report provides a detailed analysis of the foundations activities and notable achievements for the financial year. It is also the first annual report since the passing of Shri. Anil Rana and provided the platform for Mrs. Anita Rana to personally offer her sincere thanks on behalf of the Janhit team for the support they received during that difficult period.

Kevin Mundy, our new volunteer from UK has been actively involved in the activities of the foundation since June 2009. He contributed considerably to the editing of the annual report as well as working on numerous funding proposals. He has also assisted the Janhit Team in developing a photographic documentary of the new awards initiated by the foundation and represented the foundation at the Oxfam Civil Society Consultation on Climate Change.

Oxfam Civil Society Consultation on Climate Change 15th-16th July

The objective of the conference was a consultation process of civil society organisations with an

interest in Climate Change in India, as well as a civil society critique of the Indian Governments approach to tackling climate change and mitigating and adapting to its impacts. Consideration was given to the International, National and Local aspects of climate change. The conference was divided into two days the first being the discussion and debate sessions and the second being formulation of a civil society response to the climate change issues within India.

The conference was opened by the Joint Minister for Environment and Forests Mr. M. J. Mauskar. After this, the debate moved towards the international aspect of climate change and the issue of international consensus on how to tackle the causes and impacts of Climate Change. There was also discussion on the specific impacts of Climate Change within India. A great deal of discussion and critique of the Indian Government's National Mission on Strategic Knowledge for Climate Change was an important part of the conference. The critique focused on several aspects, including facts and figures, water conservation and the linking of waterways as well as the continued support for agro-chemical intensive based farming techniques and the lacking of any real sustainable agricultural policy. The final part of day one focused on case studies and civil

society approaches and project sharing. The second day involved formation of groups to discuss specific areas with the aim of formulating a civil society based approach.

ONE CHILD'S PLIGHT- THE TRAGIC STORY OF MUKESH

Mukesh, a 10 year old child belonging to a 5 member family, had already lost his father and all members in the family are minor with an exception in his mother Mrs Gayatri Devi. The mother must have always hoped that her son would grow and add to the earning hands of the family but all her dreams were shattered when those hands were removed after an accident on 19th September 2008. He was at his sister's house on the day of the accident and was casually playing on the roof of the house with other children when he lifted an iron rod lying there. The iron rod touched the High Tension wire going over the roof and the boy was electrocuted and suffered fifth degree burns on his both hands and stomach.

He was immediately taken to the Subharti Medical College, Meerut for treatment where due to the degree of burns his both hands were amputated. The mother had sold whatever little the family owned for the treatment, even the small things inside the house were sold to take care of the expenses. The mother and one of his brothers are involved in labouring to take care of the daily expenses of the house,

but the treatment is so expensive that the family struggle to earn the square meal a day.

Mukesh was a very active child when it comes to playing but now he can't help but being dependent on other seven for drinking a glass of water. When he sees other children playing, he wants to join

them eagerly but the realisation that he cannot join them causes him great sadness. A childhood should be filled with play and laughter but the reality for Mukesh is a childhood of tears and isolation, unable to play with his peers.

For obvious reasons the mother is worried over the future of her son. Is he going to depend on others for the rest of his life? She doesn't want him to adopt a life of begging like other disabled kids. She wishes to get artificial limbs for Mukesh, but after already spending the

family's savings on the immediate medical costs, and the little earnings they have not been enough to get them proper meals, how can she possibly pay for the artificial limbs.

The case was reported to the Meerut CHILDLINE, who wrote letters to District Magistrate, Meerut seeking compensation for the child. Sanjeev and Asha from Meerut CHILDLINE visited VIMHENS in Delhi to enquire about the artificial robotic limbs for him and it would cost nearly 12 lakh. The organisation has also got in touch with ZEE News who shall be highlighting the same and try to raise funds for the same. As the first step, Ms. Anita Rana, Director, Janhit Foundation has declared to donate 12000/- for the noble

cause along with other staff members who will contribute whatever they can.

We hereby appeal to the general masses to help the poor child with whatever little they feel is appropriate. The smallest of donations can make a difference to the life of Mukesh.

CLIMATE CHANGE

- THE DEBATE, BY KEVIN MUNDY

During the last two decades there has been a wealth of discussion regarding Climate Change, its causes and impacts. It has proved to be a very controversial and emotive subject. Many people still do not understand or fully appreciate how or when climate change will affect them, and I am often asked by people, what actually is climate change?

To understand Climate Change we first need to understand climate. Climate is the meteorological conditions, including temperature, precipitation, and wind, that characteristically prevail in a particular region, for example the climatic conditions of India are defined by four seasons: winter (January and February), summer (March to May), a monsoon (June to September), and a post-monsoon period (October to December). Climate Change therefore, is when the Earth's temperature increases causing changes to these characteristic prevailing weather conditions.

It is commonly accepted that Climate Change and Global Warming are naturally occurring phenomenon that have transpired throughout the Earth's history, from its birth to the present day. Simultaneously as changes occurred in the amount of Green House Gases (such as CO₂, CH₄, H₂O and N₂O) in the

atmosphere which are capable of trapping the sun's heat, there has been fluctuations and changes in the temperature of the earth and its atmospheric layers. During the last 2 billion years the Earth's climate has alternated between periods of extreme heat, with tropical conditions almost globally such as the Jurassic, Triassic and Cretaceous periods, to periods of extreme cold with ice sheets covering much of the earth's surface like that of the Miocene period.

However it is the accelerating pace of 'unnatural' climate change caused by anthropogenic activities that has so many scientists and activists concerned. As the West and parts of S.E Asia, and more recently the Newly Industrialised Countries such as China and India have developed they have emitted huge amounts of Green House Gases, predominantly CO₂ from cars and power stations. Globally, the levels of CO₂ have been rising at an alarming rate of 2.7% per year. As a result over the last century our planet has warmed by 0.74°C with about 0.4°C occurring since the 1970s. Scientists from across the globe are now saying the current rate of global warming is occurring at a faster rate than any other time, altering wind and rainfall patterns across the globe. Recently the United Nations Inter-governmental Panel on Climate

Change considered to be the most authoritative global scientific body on Climate Change, has predicted more extreme weather events and sea level rises worldwide.

Climate Change will have very real and devastating impact on the globe, and those who are set to suffer the most will be the poorest and socially marginalised of our global community. The Indian Subcontinent will not escape its affects, and will be facing many serious environmental and social disasters. There is the issue of snow melt and glacier retreat, which would result in the formation of unstable Himalayan lakes in parts of India and Nepal. Due to the unpredictable seismic nature of the region these lakes pose a risk of flash flooding and Lake Overflow with the capacity to wipe out entire communities in the valleys and plains below. Further, the eventual lose of water from glacier and snow melt would result in the major rivers of the Gangetic plain becoming purely seasonal rivers, dry except for during the monsoon period.

In addition, the increase in the temperature of the waters flowing in the rivers and seas will have significant ecological impacts, such as a reduction in fish numbers as seen in the Ganga from 85 tonnes in 1959 to 62 tonnes and falling in 2004. In furtherance to this, due to rising sea temperature, the Arabian Sea has become un-inhabitable for the sardine and other small oily fish populations which have moved away from the region, resulting in not only a loss of income but of an important nutritional component of the local populations' diet.

In reference to the monsoon the amount of rainfall is not expected to decrease but rather the total number of rainy days will reduce by 40% and the incidents of severe flooding, droughts and landslides etc will increase as well as the erratic nature of the monsoon with excessive heavy rains in some areas and a total failure with droughts in others.

Furthermore a predicted 50cm sea level rise will cause salination of coastal water resources and the substantial issue of environmental refugees arriving at the borders of India from neighbouring countries like Bangladesh as well as IDP's from environmental catastrophes within the country itself. Already two islands in the Sunderban region have been submerged displacing over 6000 people.

All of the above will result in massive water shortages throughout the country and increased pressure on those that remain. Agriculture will be severely hampered, with rain fed farmers suffering the most. It will result in an increased reliance on Ground Water for agricultural and domestic use and potential food crisis's not seen since the 1960s.

Not only will the water issue reduce agricultural output but also actual temperature rises will result in regions no longer being suitable for specific crop cultivation and increased desertification. For example the Apple Belt in Himachal Pradesh has already been pushed up to higher villages resulting in a loss of

livelihood for those lower villages and a reduction in the overall production levels.

In terms of adaption and mitigation I think that there are a few points to be made; although technology has been a major driving force in causing “Anthropogenic Climate Change” I strongly believe technology does have a role to play in terms of providing clean energy alternatives, as well as means of reducing water usage through modern recycling techniques, and improvements in farming efficiency concerning new organic bio-fertilisers and pesticides as well as having a greater understanding of eco-systems and agriculture.

The Earth is a very complex ecological life support system which relies on an equilibrium of all its components, similar to that of our own human bodies. If we misuse or mistreat small parts of our bodies then often or not the whole body will suffer. I have spent some time working in the field of drug and alcohol addiction as a support worker in the UK and I have seen the damage drugs cause through the interconnectedness of human organs and tissues. The planet and its eco-systems react in a similar way, thus we need to foster a better understanding and appreciation for this when we try to come up with alternatives and solutions.

Furthermore population growth is a massive factor in regards for India, with its increasing demands on resources and ability to produce food to feed the population. There are several points to be

made concerning this aspect; firstly it is well known that there is enough food in the world to feed the global population, it is a matter of equitable distribution that is the problem, we in the UK are nowhere near the ability of self sufficiency in food production and reliant on the global market, while in Argentina they are more than capable of feeding their population many times over with the food they can produce. We, through international cooperation need to develop a fair and just system of food distribution through an ethically managed global food commodity market which is suitable for both consumers and producers.

My second point regarding this is linked to many other areas. With development comes a reduction in population, and thus the answer to reducing or slowing unsustainable population growth is by increasing development in the less economically developed countries.

However the big issue is how to obtain sustainable industrialization and development. I think firstly that the Western countries should be doing more to utilise the wealth of technology and money to create green energy resources and means of clean industry, while working towards a totally non carbon based economy, meanwhile this should allow for developing countries to slowly phase out carbon based fuels over a period of time which does not prevent or slow industrial and economic development. In addition the West must start to pay for its past and current high levels of pollution

through subsidising the right of developed nations to have access to technology as well as paying for the costs of mitigation and adaptation to Climate Change. This should not be viewed as aid or charity but as a right for payment to mitigate and adapt to a problem that is not of their causing, and for which they will suffer considerably more than those whom are responsible.

Further to this there must be more awareness amongst citizens of developed nations to the present and future consequences up on the world's poorest and social marginalised people regarding the way they live their lives. We must remember that those in the developed world make up the minority of the global population with 85.4% living in the developing world according to the UN's Human Development Index, and thus we should view the world not only as developing and developed but also majority and minority alike!

I also strongly believe that the model of development and society as promoted by the West through the IMF, WTO and World Bank is fundamentally flawed. The rampant consumer capitalist systems of the West only produces a wasteful throwaway society which is neither ecologically or sustainably sound, with much of that waste ending up in developing countries such as China or more recently Brazil. The West only

produces a wasteful throwaway society which is neither Ecologically or sustainably sound, with much of that waste ending up in developing countries such as China or more recently Brazil. It inevitably relies on exploitation and creates massive social inequality, both globally in terms of North and South, and also with in countries of those regions as well. I do not claim to have an answer to this problem or wish to deny countries like India the privileges that developed countries have monopolised for so long, however there is a need to create a new model for the further development of humankind in a much more equitable and sustainable fashion.

In terms of food production I feel water will be a major factor for India with the well documented impacts Climate Change will have on resources both of surface and ground water. An important part of this is to stop the unabated and checked pollution of surface and ground water resources. In India I am horrified by the ability of industries to pollute with impunity. I am aware that the legislation is there but what appears to be lacking is the political and institutional will. In times where water is becoming scares and India is heavily reliant on water for agriculture (I believe 85% of water usage in India is for agricultural purposes) and food production, everything should be being done to protect and conserve water for periods when the monsoon fails, which will be increasing with the onset of Climate Change. I suggest that if there is an institutional inability to do this then it must

fall to civil society and organisations such as the Janhit Foundation to demand a respect for the law.

Also technology needs to be utilised to support organic and sustainable agriculture which is much less water intensive and more in tune with the local eco-systems. Techniques such as those promoted by the Janhit Foundation have an important role in achieving a more ecologically and climate friendly means of agricultural cultivation.

The Indian Government's current mission on Climate Change with specific regards to agriculture has a total omission of any kind of sustainable or organic agricultural systems and this needs to be rectified. Initiatives such as subsidies for farmers to convert to organic farming and support from the West in terms of improving the technology involved would go a long way to creating a more sustainable and climate change resistant agricultural sector globally. Surely if we have money to bail out the irresponsible banks and the automobile corporations or develop trillion

dollar satellite defence systems (i.e. US Government) then there is the money and technical knowhow to invest in improving and enhancing sustainable organic farming. I for one do not believe that GM is the answer, rather than working against nature surely we should be developing ways to work with in nature and the natural eco-systems that exist.

Climate change and all its impacts are very poorly understood by many, myself and many environmentally oriented people included. The implications of our way of living in occidental nations (but also increasingly in other countries) has been devastating, and the burden of this has, and will fall mainly up on the world's poorest and most socially marginalised. The issue however requires people to work together to solve the problem, you can't do it in little pockets or by getting someone else to 'take care' of your emissions for you (i.e. Western governments). It requires massive social planning and some sort of popular recognition that the current economic and political systems are not working to that end.

COMMENTS FROM AROUND

Sukhpal Singh, Award Winning Farmer:

"I was very much surprised to be short listed as I am only a small farmer with 3 acres of landholding. To have actually won the award came as an even greater surprise and I am deeply honored. As a result I am even more committed to the Janhit Foundation and organic farming and I am determined to convert more of my peers to adopt the organic way of farming".

Asha Rani, Para-professional CHILDLINE:

"It was a great experience planting the trees to mark World Environment Day and for the Foundation and Childline to be associated with the Hindustan newspaper. The event organised in office was very enlightening and I learnt a great deal of new things and widened my knowledge on the environment; thanks to the opinions shared by my colleagues. I feel it was a very nice way to mark the day".

K. K. Roy, Adv. (Allahabad High Court):

"It was a great honor to assist the foundation in releasing the book on my close friend Shri Anil Rana Ji. I have enjoyed reading the biography very much and it has brought back many fond memories of my long association with him and the foundation. I am pleased to see that Janhit is still achieving many great things today".

Mrs. Rita Gupta, Principal, Army Public School, Meerut

"It's a good start and it was certainly an honour to receive the award in the very year of its inception. It's a pleasure to see the recognition coming our way for whatever little we do. The award has motivated us to continue working on the same lines and bring better results in the coming years".

Dr Kaushal Sharma, Kirorimal College, New Delhi:

"After the death of Shri Anil Rana Ji, I feared for the future of the Janhit Foundation without their inspirational director. But I am pleased to see that Janhit is continuing to achieve great things. The 2008-09 annual report is a testimony to this. It was excellent to read about all the years activities and successes as well as the recognition the foundation has received for its hard work".

Sunil Yadav, Janhit Team Member:

"The recent Stakeholders meeting held for the UNDP project was a great success. It was an ideal platform to hear the many views and opinions of all the stakeholders and I am happy to say a consensus was reached and the oath taking to no longer use the harmful pesticides was a great mile-stone for the project. We now have the momentum to move forward with this project and can look forward to its successful completion".

Kevin Mundy, UK Volunteer with Janhit Foundation.:

"Attending the 18th function marking the first anniversary of the death of Anil Rana was an honor for me. It was clear to see from the packed hall that many people held him in high regard and wished to pay their respects to his memory, and also show their support for his life's work. I have worked for numerous organisations and NGO's in the UK and I am greatly impressed by the hard work and dedication that the staff show here at the foundation. I am from an academic background in International Development Studies and have been involved in Development since 2003. It is great for me to see a grassroot NGO like the Janhit Foundation in action and the important role it plays in social and environmental development here in Western Uttar Pradesh. The many tributes made by those who knew and worked along side Dr. Rana, and the recent book which was launched made it quite clear to me that the foundation's success is rooted in his hard work and determination. I feel the function was a worthy tribute for such an inspirational man".
